## SUMMARY

Senior Full-Stack Engineer with ~7 years of experience shipping production systems end-to-end across **React**, **Next.js**, **Vue.js (2 & 3)**, **Node.js**, and **TypeScript**. Designed and delivered multi-tenant platforms, micro-frontend architectures, authentication/IAM services, shared component systems, and cloud-integrated applications across **AWS** and **GCP**. Hands-on across frontend development, backend APIs, RBAC, serverless AWS services, and AI/LLM integrations including **AWS Bedrock**. Built shared design systems consumed across React and Vue, led framework migrations with measurable performance gains, and established testing and engineering practices across teams.

## TECHNICAL SKILLS

**Frontend:** React.js, Next.js (SSR/SSG/ISR), Vue.js (2 & 3, Composition API), Nuxt.js (SSR), TypeScript, JavaScript ES6+, HTML5, CSS3/SCSS, Tailwind CSS, Storybook, WCAG, i18n

**State & UI:** Zustand, Pinia, Vuex, React Context API, XState, Material UI, Shadcn UI, Vuetify, Quasar Framework

**Backend & APIs:** Node.js, NestJS, Express.js, RESTful APIs, GraphQL (Apollo), SSE, WebSockets, Headless CMS (Strapi, Shopware)

**Testing & Tooling:** Vitest, Playwright, Jest, React Testing Library, Vite, Webpack, Docker, GitHub Actions CI/CD

**Cloud & Data:** AWS (Lambda, S3, DynamoDB, ECS, CloudWatch, Step Functions, Bedrock), GCP (Cloud Functions, Pub/Sub), PostgreSQL, MySQL, Redis, Firebase, Supabase

**Auth/Security:** JWT, OAuth2, RBAC, SSO, PKCE, multi-tenant isolation

**AI:** AWS Bedrock, LLM Integration, AI-powered Applications, Prompt Engineering

## WORK EXPERIENCE

### Senior Technical Analyst

Intersoft Data Labs

Gurugram, India (Remote) | Apr 2026 – Present

- Working as a full-stack engineer across **Vue.js** and **React** frontends with **Node.js** backend contribution and assisted .NET integration for an **EHR-integrated, multi-tenant healthcare learning platform**.
- Own and maintain the **shared component library** used across multiple applications, ensuring reusable UI patterns, WCAG accessibility standards, multi-locale i18n support, and consistent maintainability across tenants.
- Develop and extend a centralised **management center** governing tenant configuration, content publishing, documentation, and platform-wide operations for the healthcare learning ecosystem.
- Implement and integrate **RBAC** across applications and platform workflows; work with **AWS Lambda** and **Step Functions** to support serverless backend processing and application workflows.
- Contribute to AI-powered learning capabilities using **AWS Bedrock** and enterprise LLM services, with responses grounded in management-center published documentation as the controlled source of truth.

### Software Development Engineer – 2

Applore Technologies

Bhubaneswar, India | Oct 2024 – Mar 2026

- Architected a multi-tenant, micro-frontend platform (route-based composition) for multiple US telecom brands — built the **MVNO self-service portal in Next.js (App Router)** with Material UI and Strapi CMS, owning core subscriber journeys end-to-end: plan discovery, SIM activation, account management, and the subscriber dashboard.
- Developed the e-commerce device store in **Nuxt 3 (Vue 3)** with Vuetify and Vue Storefront connected to Shopware — delivered full cart, checkout, and product catalogue flows with a feature-flagged headless CMS integration that cut deployment cycles by 40%.
- Built the **Node.js** backend for the device store — designed RESTful APIs serving the storefront and integrated with the broader platform backend for inventory, order management, and fulfilment services.
- Implemented production-grade observability using **AWS CloudWatch**, structured logging, and rate limiting across 15+ endpoints; provisioned **DynamoDB** and Lambda-backed event-driven services to maintain 99.9% uptime under peak traffic.

## Senior Software Engineer

Gate AI Pvt Ltd

Chennai, India (Remote) | Dec 2023 – Sep 2024

- Joined early-stage and led development of a **GenAI Orchestration Platform** spanning 4 interconnected applications, taking the product from MVP through production V1. Participated in system design discussions and owned the full frontend-to-backend delivery pipeline across the ecosystem.
- Built the **Superadmin portal in Next.js** with Shadcn UI, Chart.js, and SendGrid — covering tenant provisioning, usage analytics, billing controls, and transactional notifications across all platform tenants.
- Designed and shipped the **Centralised Auth Portal (IAM service)** — Vue 3 + Tailwind frontend backed by Node.js/Express/MySQL implementing **JWT, OAuth2, SSO**, and fine-grained RBAC.
- Delivered an enterprise **Design System** with XState-driven UI logic and Storybook documentation, establishing a shared component base across React and Vue. Led Vue 2 → Vue 3 migration achieving ~40% performance improvement.

## Senior Software Engineer – 1

Geekyants

Bangalore, India | Sep 2021 – Nov 2023

- Built a **4-product fintech ecosystem** for 10,000+ active investors — owning the investment platform, advisory console, CMS, and event-driven GCP backend from architecture to go-live.
- Built a **headless CMS in Next.js (SSG/ISR)** backed by serverless Firebase Cloud Functions and GCP Pub/Sub — modular enough that new content types required no backend changes.
- Developed a three-tier advisory console (Portfolio, Analytics, Admin) in **Vue.js** with RBAC and feature-flag system — different professional roles received distinct capabilities without separate builds.
- Led **Vue 2 → Vue 3** migration cutting 40% of technical debt. Set up **Vitest** and **Playwright** in CI/CD from scratch; mentored junior engineers on TypeScript and testing practices.

## Software Engineer

Kalsoft Solutions

Bhubaneswar, India | Oct 2019 – May 2021

- Built two 0-to-1 enterprise products — a multi-tenant Sales CRM and a real-time market analysis platform — in **Vue.js (Quasar)** and **NestJS** with a schema-first **Apollo GraphQL** layer on MySQL/PostgreSQL. Designed a GraphQL data-sync layer keeping complex industrial datasets consistent across global clients.
- Developed an in-browser data processing engine (Js spreadsheet, SheetJS) for bulk datasets without DOM degradation, and real-time analytics modules using FeathersJS and WebSockets with Plotly/E-charts visualisations backed by Redis caching.

## PROJECTS

### Celestial Auth — Multi-Tenant Authentication Platform

Personal Project

Completed

- Built a multi-tenant auth platform supporting 10+ auth methods (OAuth, SSO/SAML, MFA/TOTP, WebAuthn/Passkeys, magic link, QR login) with two interchangeable frontends — **Next.js 15** (Zustand) and **Nuxt 4** (Pinia) — consuming a config-driven Express/Prisma API with Zod-validated feature-flag routing.

### CareCaddy — AI-Powered Clinical Care Platform

Personal Project

In Active Development

- Building a dual-portal healthcare SPA in **Nuxt 3** (Vue 3 Composition API) with **Pinia** and **NestJS** microservices on AWS — implementing layered RBAC guards, break-glass emergency access, JWT auth, and full audit trails.

## EDUCATION

### B.Tech, Computer Science

Silicon Institute of Technology

Bhubaneswar, Odisha | 2015 – 2019
